Repairs & Maintenance

In addition to design and installation, Sovereign also offer repair and maintenance services. Whether you need reactive maintenance due to plant failure, or a full facilities management contract to ensure the smooth running of your operations, Sovereign can help. Our maintenance department will ensure that you are meeting your statutory requirements, maintaining your full compliance with your corporate responsibilities, whilst ensuring that your equipment is running at its most efficient, saving you money by keeping running costs low. Please turn over the leaflet for more information on the type of services that we offer, call us today for a friendly chat about your requirements, or visit our website for further details.

Energy Efficiency

Making sure your air conditioning system works as efficiently as possible is one of our main aims at Sovereign - that's why we offer a host of services to help you achieve just that. From providing air conditioning energy assessments to supplying advice on low carbon grants and enhanced capital allowances, Sovereign are the team to call for energy efficient products and services. Visit our website for more information.

ARE YOU ELIGIBLE FOR A GRANT?

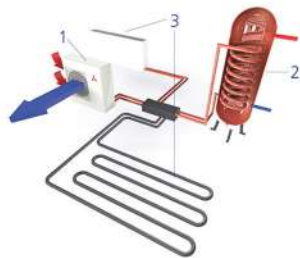

Energy & Efficiency 'Case Study'

- **Project:-** **The Grange Sixth Form College**
- **Type of building:-** Educational Building
- **Client:-** Whitfield and Brown
- **Services provided:-** Heat recovery air handling unit / Mitsubishi Electric air conditioning units
Mitsubishi Electric Ecodan Heat Pump Boilers
Domestic hot and cold water services / Under floor heating
Drainage and sanitary ware / Building Management System

- **Value:-** **£262,775.00 inc. VAT**

Heatpump Boiler Installation

Heating and hot water were provided by Mitsubishi electric Air Source Heat Pump Boilers (HPBs). This reduced its Co2 emissions due to the efficiency of HPBs, which harvest heat from the atmosphere, rather than simply converting electricity to heat, as in less efficient electric heating systems. Running costs are therefore brought down to a similar cost as gas heating, which is recognised as the most economical source of space and water heating fuel, and in conjunction with government incentives, through the Renewable Heat Incentive, the slightly higher installation costs can be recouped through the life time of the equipment.
